GLITRA.

STANDARD | SECURED | SUSTAINABLE

AGILE SOLUTIONS TO COMPLEX CHALLENGES

Glitra's approach to digital transformation is driven by innovation, ensuring improved operational efficiencies, high revenue growth, and reduced IT spend. The Glitra Managed IT service portfolio integrates our expertise in DevOps and Agile practices with our proven experience, helping your organization achieve your digital business objectives successfully.

OUR SERVICES

Software Development

Hosted on premise or on the Cloud, we can build, change, or migrate custom applications through pragmatic and business-focused design, expert architecture and implementation while maintaining quality, while always keeping the focus on your business objectives. Traditional Java - C++ to new trend Python- Rubi, we are proficient to all !

DevOps

Our DevOps engineers incorporate DevOps processes in your organization and use modern tools that complement our frameworks. We automate your both On -Prem. and Cloud infrastructure and processes while ensuring continuous delivery and continuous integration to quickly get your product to the market. Custom development to out of box implementation , you have our trusted support

DevSecOps

Using our DevSecOpsec services helps ensure the security of the entire software elaboration cycle to minimize disruptions. Once the strategy is fully implemented in your organization, your teams are held accountable for adhering to safety practices. Automatic checks also are applied at every development step by integrating protection components into Security DevOps Model.

Quality Assurance

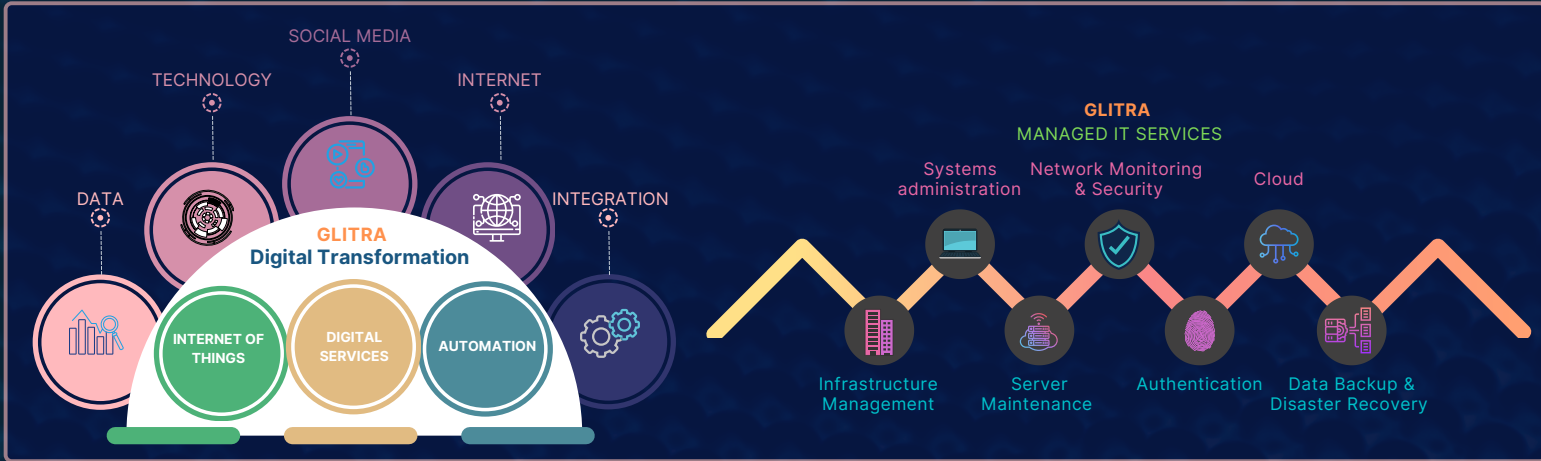

The QA department of Glitra is engaged in testing of various software, web and mobile applications. Our experts do their best to make your projects operate flawlessly. Every idea of yours will be incorporated in a final product according to all the requirements and specifications. Manual to Automation to regression Testing .

Automation

IT process automation is a series of processes which facilitate the orchestration and integration of tools, people and processes through automated workflows. software applications can be programmed to perform any repeatable pattern, task or business workflow that was once handled manually by humans. Our methodology full use of Current AI and ML gives the cutting edge!

Expert IT Consulting

Our consultants embrace your company requirements and are available during the life cycle due diligence process. From the strategy concept to establishing your ecosystem, they provide reinforcement, encouragement, and accompany you as your business expands and evolves. We do Consult and Support for all the competencies we offer with a successful delivery.
